QA PROJECT REPORT

Demo Blaze E-Commerce Store

Manual Testing Execution & Validation

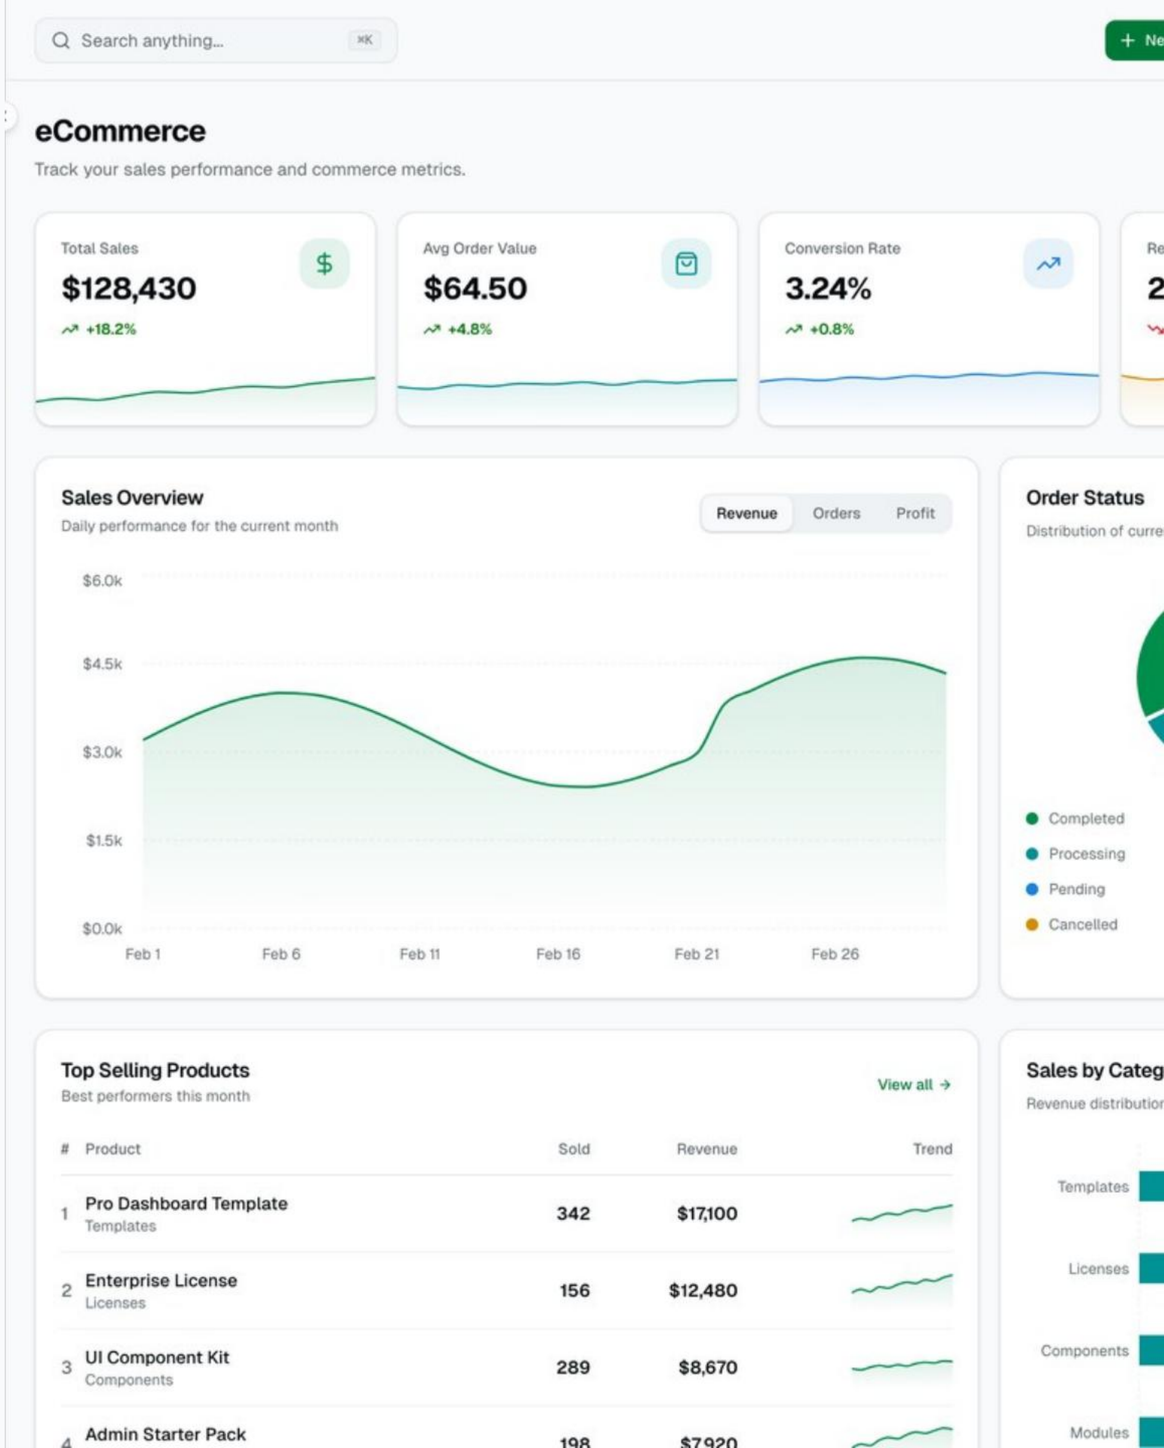

By Shubham Ravikumar Narwade

PRIMARY OBJECTIVE

Application Functionality Validation

> Performed manual testing to verify application functionality.

- **System Checked:** Demo Blaze Storefront.
- **Core Goal:** End-to-end user journey stability.

Testing Methodologies

Comprehensive coverage strategies applied.

Executed functional, smoke, sanity, regression, and black-box testing.

Functional & Smoke

Core feature stability verified.

Sanity & Regression

Impact analysis post-updates.

Black-Box Approach

End-user perspective validation.

Test Scenario Design and Execution

Representative scenarios for the main user journeys

ID	Module	Test Scenario	Expected Result
TS-01	Home page	Open the store URL	Home page and categories are visible
TS-03	Login	Log in with valid credentials	User is logged in successfully
TS-05	Cart	Add a product to cart	Selected product appears in cart
TS-07	Order	Open Place Order and submit valid details	Order confirmation is displayed

Actual Result vs Expected Result

How observations are documented during manual execution

Test Area	Expected Result	Actual Result to Capture
Add product to cart	Selected product is displayed in cart	Record what the application actually displays
Remove product	Selected product is removed from cart	Record whether the row disappears and total updates
Invalid login	Access is denied and feedback is shown	Record exact message / observed behaviour
Place order	Confirmation appears for a valid order	Record confirmation and order summary

Defect Identification & Verification

Identified defects and verified actual results against expected results.
Discrepancies were documented for defect tracking and retesting.

Execution Summary

100%

Test Execution Rate

3+

Core Modules Validated

QA

Sign-off Complete

Testing Complete.

Demo Blaze application functionality successfully verified and defects documented.
